RE: Approved Manufacturer for Margaret Ann Crigler Park Bandshell Roof

Project Owner: Mississippi Department of Archives & History
200 North St PO Box 571
Jackson MS 39201

Project Architect: Perkins & Will
1315 Peachtree St NE
Atlanta GA 30309

QUALIFICATIONS STATEMENT – COVER LETTER

Please accept this qualifications information with regard to the abovementioned scope of your project. As a long-time specialty Design / Build firm, Span Systems is fully qualified to provide a competitive bid/proposal to engineer, fabricate, and install the structure as shown in the bid documents. We have done dozens of projects of similar size and complexity, many of which can be seen on our web site at www.spansystemsinc.com. On the attached list of projects we have highlighted multiple recent successful projects directly comparable to your project.

In Mississippi, we recently completed a full refurbishment of two tensile structures owned by the City of Gulfport – for whom we originally designed and installed the structures in 2010.

Please let me know any further questions you may have or information you may require.

Thank you for your consideration.

Best Regards,

Stephen Kolozsvary – Project Manager

SPAN SYSTEMS, INC.

STATEMENT OF QUALIFICATIONS

Division 13 – Special Construction Section 133100 – Tensile Membrane System

RE: MARGARET ANN CRIGLER PARK – BANDSHELL CANOPY STRUCTURE

Notes for qualifications of Span Systems Inc. as manufacturer and installer for Tensile Structure scope including specific reference to the above listed project.

- Span Systems, Inc. has been operating under the same name since initial incorporation to present. Span Systems Inc. was incorporated under the laws of the State of New Jersey in 1969 and was re-incorporated in the State of New Hampshire under the same name on April 14, 1993.
- Span Systems has designed, fabricated and installed hundreds of tensile structures utilizing PTFE coated fiberglass architectural fabric or PVC coated polyester architectural fabric including many structures of similar size and complexity to this project.
- Span Systems has maintained a professional design staff throughout its existence. A final design submittal, prepared by Span Systems will be signed and sealed by a Professional Engineer licensed in the State of Mississippi.
- All design includes large displacement finite element analysis with computerized form finding and fabric pattern generation.
- Span Systems' fabrication facility is equipped with up-to-date cutting, material handling and heat sealing equipment. Workers experience totals decades of assembly of tensile fabric structure components of all fabric types. Steel fabrication sources all fully AISC & AWS compliant, specializing in custom. Tensile Membrane Structures.
- Sufficient general/public, professional, and umbrella insurance coverage is maintained in accordance with industry best practices and meets all project requirements.
- Detailed quality control protocols and manuals are developed and enforced for all design, fabrication, and installation procedures. We meet or exceed all OSHA safety protocols and policies. All QC/QA and safety documentation available for review.
- Regular inspection, reporting, warranty, and maintenance service is provided by Span Systems in coordination with the requirements of owners and facility managers. The average length of employment for all Span Systems' installation personnel is twelve (12) years.
